By the side of Roads & Hedges.

TIME.

June July & Aug.t

DESCRIPTION.

The Root is long, whitish. and often Crooked, with many small Fibres. The Stalk is round, woody, branching out like a small Shrub, cover'd with a Brownish Bark full of short white hairs. The Leaves 1, near the Root, are Cut into several pair of Jagged Segments, decreasing in their Number as they grow higher, becoming like the Head of an Arrow 2, being of a good green with purplish Stalks. The Empalement 3, is a light Green toped with purple. Four Yellow Leaves compose each Flower, which grows at the Ends of the Stalks. the Seed Vessell is Green and hairy, divided at the top to receive the Farina which is Yellow there are six Chives with Summits. See 4, 5, 6, 7, 8 which are Magnified.
